#### Perfect connection

In a healthcare facility, the CMGPS is life-supporting element that has direct influence on maintaining the life of a patient. The medical gasses supplied through the CMGPS should be clean, pure and supplied under stable pressure. **SonneMed** CMGPS covers complete pipeline for *Oxygen, Suction, Compressed Air, Carbon Dioxide & Nitrous Oxide* and conforms to best National & International regulations, compliances and standards [DIN, NFPA, HTM, BS, EN & ISO etc. as applicable].

The CMGPS components include:

- Gas Manifold Systems
- Gas Line Management Solutions including Area Valve Boxes & Service Units, Medical Gas Alarm Units&Isolation Valves
- Gas Delivery Solutions including Medical Garde Copper Pipes & fittings, Medical Gas Outlets, Ceiling Supply pendants, Over Bed Panels
- Control Panels
- Vacuum System
- Compressed Air System
- Anaesthetic-gas Scavenging System etc

SEMI-AUTOMATIC MANIFOLD

OXYGEN

AUTOMATIC MANIFOLD

П

**Medical Gas Manifold Systems** 

Manual Manifold System consists of the main gas delivery bank and theemergency reserve bank. Once the primary bank is depleted of its gas, the same will be turned off manually & switch over to the reservebank manually for reactivating the gas flow.

**Semi-Automatic Manifold System**consists of the primary bank and the emergency reserve bank. When the pressure in the primary cylinder bank reduces to the pre-set value, the changeover takes place automatically to provide continuous supply of gas from the reserve bank. The priority handle should be manually switched during cylinder change.

Automatic Manifold Systemis designed to provide an uninterrupted gas supply without any manual adjustments. This system automatically changes over when the primary cylinder bank is depleted. Even in case of power failure, the system continues to supply gas without interruption.

Digital Automatic Manifold Systemmonitors cylinder bank pressure electronically, automatically changes over to secondary bank when the primary cylinder bank is depleted, and eliminates the need to manually set a priority side. The Touch Screen

enables easy control and monitoring.

**Standard Features Manual Manifold** Semi-Automatic Manifold **Automatic Manifold** 60mm flexible high pressure stainless steel braided pigtails with check valve. Rigid copper pigtails are available as an option. Pigtails for Acetylene models are equipped with dry flashback arrestor. Relief valve at outlet for protecting downstream piping. . Style Open Open Open Silver brazing on piping joints for maximum leak prevention Designed for future expansion Pressure switch port Wall / Stand Mounted Unique Automatic changeover system for uninterrupted supply of gas from primary and emergency reserve banks Automatic Switch off when gas is depleted Works in case of Power Failure

#### Medical Gas Line Management Systems: Isolation & Area Service Units

#### 

A 219

Road No 6

Mahipalpur NH-8

New Delhi-110037 INDIA

#### Area / Zone Valve Box Unit

Zone Valve Boxes are mainly used in medical pipelines to allow maintenance of individual zones without disturbing the gas flow to other zones. In case of emergencies, zone valve boxes can also be used to shutoff of gas distribution to individual zones. A single box can hold from 1 to 6 valves, allowing control of 6 types of gas. All boxes are pre-assembled with the smallest valve at the top& largest at the bottom.

- Available for 1 to 6 gases
- 2mm steel valve box
- Suitable for12.5mm to 50mm valves
- Pre-installed copper tubing extensions
- Full port valves for high flow
- With Gauges
- Complies with NFPA 99 / DIN requirements
- Cleaned for oxygen service

#### Area / Zone Valve Service Unit

In case of emergencies, zone valve service units can be accessed for servicing and can also be used to shutoff of gas distribution to individual zones. A single box can hold from 1 to 6 valves, allowing control of 6 types of gas. All boxes are pre-assembled. The unit houses the shut-off valve and check valve with NIST connection. Easy to operate and maintain with Steel enclosure for durability. Pressure gauges included to provide accurate reading of pressure.

- Available for 1 to 6 gases
- 2mm steel valve box
- Suitable for 12.5mm to 50mm valves
- pre-installed copper tubing extensions
- With Gauges
- Complies with the units are HTM 02-01 requirements
- Cleaned for oxygen service

#### **Gas Control Panel**

Designed for surgical tools and equipment, the control panel has diaphragm-sensed regulator ensures a consistent outlet pressure. CGA specified inlet connection, with  $\frac{1}{4}$  turn shut-off stainless steel ball valve rated at minimum 300psi. Two pressure gauges 0-400psi 50mm dia. to monitor inlet & outlet pressures. The regulators are adjustable [0 - 300psi]. The DISS outlet with index safety for Air / Nitrogen outlets for pressure above 200psi.

NFPA 99 compliant

#### Medical Gas Line Management Systems: Area & Master Alarm Systems

**SonneMed** offers is a highly modular system utilizing the most advanced technologies in electronics and software. Accepts all 4-20mA and voltage signals and the monitor can be customized reading or alarm conditions such as humidity, temperature, concentration levels, and flow rates in addition to typical pressure readings. Medical Gas Line Management system alarm series complies with the latest edition of NFPA 99 and HTM 02-01.

Medical Gases Master / Area Alarm - Standard This master device can continuously monitor & audio alarm when the alarm limit is reached.

#### Features

- Front Panel constructed of metal alloy and ABS
- Optional 25cms Resistive Touch Panel for TS version & digital display for Standard versiaon
- Adjustable alarm volume
- Analog/Digital Input Channels & analogue output channels
- NFPA99 Compliant
- Networking Capabilities
- Events & Trends Log
- Service Forecast
- Built-in Menu for Alarm conditions
- Optional connect via VNC apps for smartphone and tablet

#### Specifications

SonneMed gas outlets are designed for delivery of medical gas from a central pipeline system. These outlets are 100% individually tested for leaks to ensure safety. The outlets are designed with safety in mind and comply fully with ISO 9170-1. Outlets are manufactured in an ISO 9001: 2008 and ISO 13485 registered facility.
